Uneven

By Ghostgum

Parts of this casebook are interesting but the Author has a tendency to repeat his title so frequently that I wonder if he is too preoccupied with self-promotion. Some chapters are dull. I guess it depends on how much exposure a reader has had to the facts of forensic psychology as far as they are currently understood. If you haven't had much exposure you may find this book interesting. I found it disappointing.

The Strange Case(s) of Dr. Jekyll and Mr. Hyde

By William Holmes

The artist Paul Gauguin once said that "life being what it is, one dreams of revenge." In "Bad Men Do What Good Men Dream," Dr. Robert Simon explains that all people have "bad dreams"--thoughts of suicide, or revenge, or crime--but only a very few cross the line from bad dream to bad action.

This book explores the nebulous borderline between what people think and what they do. The topics covered include serial killing, workplace violence, multiple personality disorder, killer cults, suicide, sexual misconduct by professional caregivers, rape, stalking and psychopathic behavior.

In each area, Dr. Simon's analysis shows just how complex and surprising the human mind can be. Even apparently straightforward questions, such as whether a given criminal is likely to be dangerous in the future, or whether a "suicide" is actually an accident, turn out to be very hard to answer.

At times, Dr. Simon's style is a bit academic, but on the whole he writes clearly and does a good job of covering a wide range of complex issues.
