This book is an excellent guide for either trainee or newly qualified pharmacists. It covers most ailments

which may be encountered on a daily basis in the community pharmacy and describes features of more serious underlying disease to aid diagnosis or referral. It is well presented and clearly laid out with separate chapters for each ailment. At the end of each chapter are example case studies giving in summary both the view of a pharmacist and medical doctor for each condition. My only criticism is that there are no illustrations or diagrams which I feel would have been helpful when describing clinical features of some conditions. Nonetheless there are clear descriptions of each ailment, highlighting symptoms, possible causes and most appropriate treatments. Importantly it gives clear guidelines on when to refer presenting ailments to a doctor. It is comparable in style to the title *Minor Illness or Major Disease*, however this title is illustrated with photographs of illness to aid recognition. A useful guide for all student pharmacists, preregistration pharmacists and possibly newly qualified pharmacists.

REALISTIC SITUATIONS IN THE PHARMACY

By Richard W. Madden, MSc, RPh

This would make an excellent introduction to clinical community pharmacy for undergraduates and for ce programs for licensed pharmacists. The descriptions of typical presentations to the pharmacist by patients or clients, the pharmacist's response and a followup critique by an MD are well done. A followup revision would benefit from better organization of topics by organ system to facilitate location of information. Well designed decision trees would be a great help.
